ABSTRACTED-PUB-NO: KR2002001295A
BASIC-ABSTRACT: NOVELTY - A method for showing search result and an apparatus thereof are respectively provided to display the search results according to interest of a user when searching through the Internet.

DETAILED DESCRIPTION - A search term is provided from a client system(100) provides to a server system(200) of an electronic bookstore through a communication network. A search server(210) of the server system(200) analyzes the search term and uses the analyzed search term for searching from a book list database(230). The book list database(230) has data concerned with

various types of books. The search server(210) generates a web page including an array of information units based on search results. The search server(210) also utilizes weight information stored in an appropriateness database(250) when creating the web page.

TEXT:

SPOTLIGHT SUMMER CES Hot Products for the Home Theater

Home theater was still pretty much a buzz word at last year's Summer CES show, but this year, a whole new crop of products are entering the channel that offer consumers a mind-boggling array of choices in designing a home theater. The following list - while not all home theater products - indicates that consumer electronics manufacturers are taking the home theater concept seriously, and making products that fit a variety of budgets. Billboard's top picks for hottest products of the summer are:

Acoustic Research (617-821-2300). Acoustic Research (AR) is debuting a new line of home loudspeakers dubbed the Holographic Imaging Series, which is a match made in heaven for the home theater market as well as for those who are particular about home audio reproduction. With more movies being mixed in sophisticated surround-sound on both tape and disc, the ability to separate the various tracks, creating an audio "image" if you will, is crucial to the surround experience. AR has risen to the challenge with the Model 6 (M6) which along with the M5 uses a new technology known as Filtered Suspension. Woofers are mounted into an acoustic suspension enclosure, and fire into a band pass chamber, allowing for the roll-off of unwanted high frequencies without the use of power-hungry crossover components. Each unit contains liquid-cooled tweeters, and are off-set in mirror-image fashion on their baffles under each woofer, meaning each pair of speakers comes as a "left" and "right" which serves to create a holographic stereo "image."

In pure layman's terms, the Model 6 from Acoustic Research lets you hear music the way the producer heard it in the studio - with instruments and voices in the exact position they were meant to be heard, with you sitting in the middle. From a visual standpoint, the M6's small footprint means taking up less floor space, and the various finishes - gray suede (\$1,300/pr), black gloss (\$1,400/pr), walnut (\$1,400/pr) and rosewood (\$1,800/pr) means the speakers become a part of the visual ambience of the room as well as the audio ambience. The entire line of the Holographic Imaging Series ranges in price from \$250 to \$1,800 per pair.

Eclipse Mobile Electronics (213-532-3062). Audio for the car has taken a giant step forward with the introduction of two new products from Eclipse, the EQS-1000 DSP Digital Sound Processor, and the EQZ-301 in-dash AM/FM cassette deck. While the deck and processor are two separate units, they deserve to be considered as one because of how well they complement each other's performance. First the deck: Using an Eclipse-Bus Data Link, the EQZ-301 offers remote control of both a trunk-mounted ESD-330 CD changer and the new EQS-1001 Hide-Away Digital Sound Processor.

Users can access up to 10 discs loaded in the CD Changer, and will control track up/down, fast forward/reverse, repeat, scan, and random play. Perhaps the most unique feature is the Touch Logic Control (TLC) system that is both display and control panel.

The EQS-1001 Hide-Away DSP Digital Sound Processor is the successor to the popular EQS-1000 which debuted in early 1990. The new model is meant to save space by being mounted in the vehicle's trunk, while delivering its controls up to the EQZ-301 in-dash unit. The EQS-1001 delivers top quality "surround-sound" for the car, and is fully configurable for a variety of modes from theater to concert stage to faithfully reproduce music in the automobile as if it were being listened to at home. The EQZ-301 and EQS-1001 (coupled with the ESD-330 CD changer) are the "Rolls Royce" of car stereo systems, have redefined auto audio reproduction, and are going to be a tough combination to beat. Suggested list: EQZ-301, \$600; EQS-1001, \$700.

Commodore International (215-431-9100) has introduced an entirely new consumer electronics category - an interactive multi-media player called CDTV for Commodore Dynamic Total Vision. Based on compact disc and CD-ROM technology, CDTV combines audio, video, graphics, and text in a variety of information and entertainment products. The unit itself looks like any table-top CD player and will, in fact, play not only regular audio CDs, but CD+G discs which include graphics, CD-ROM discs, CD+MIDI discs and the new multimedia CDTV discs and is designed to be hooked up to any TV and play CDs that contain reference materials like encyclopedias, games, books, and music.

Just what can you do with CDTV? The question would be better asked,

"What can't you do?" Because CDTV is interactive, it means the user has a **choice** of the type of information or entertainment to be viewed, and complete control over the **order** in which it's viewed. For example, one title currently available is the New Grolier **Electronic** Encyclopedia. Instead of 21 volumes of **printed** and bound **books**, the entire encyclopedia comes on one CD- **sized** disc, and the more than 30,000 articles on subjects from A-Z, the nine million words, 2,000 pictures, illustrations, maps

Two handheld units debut for easy remote access to mainframes. (The VideoPad from Kiel Corp.; Text Lite PX from Text Lite Communications)
 Telecommuting Review: the Gordon Report, v4, n6, p8(2)
 July 1, 1987
 ISSN: 8756-7431 LANGUAGE: ENGLISH RECORD TYPE: ABSTRACT

ABSTRACT: The VideoPad from Kiel Corp allows remote users to send or receive information to a central **computer** without using a full- **sized** keyboard or screen. The **product** is about the **size** of a paperback **book** and includes a built-in 300 or 1200 baud modem; five single-line 25-character displays; and four keys at the bottom, which can be custom-labeled. Telecommuting uses include sending information back to the office and retrieving data from company files. Unit cost depends on application, quantity **ordered**, and **customization** needed. The Text Lite PX 'Pocket- **Sized** ' Terminal from Text Lite Communications (\$695) features a keyboard, a 40-character one-line screen, and 7Kbytes of memory. The unit's application's include: telexing; **electronic** mail access; remote data entry; and messaging between terminals. Telecommuting uses are for those who need a fully portable (overall dimensions 8.75 by 3.25 by 1.25 inches) terminal and don't want to deal with a larger PC or laptop.

Edit -- The digital imagination

SECTION TITLE: GENERAL

Pratik Kanjilal

INDIAN EXPRESS

June 15, 1998

JOURNAL CODE: WINE LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 1076

Something unusual happened to **books** this month. They no longer need to come out in hardback or paperback, nor in paper and ink. June 1998 has seen the complete birth of the digital text. Of course, the electronic **book** has been around for almost a decade, but it has always been copyright-expired material. A typical electronic library on the Internet would stock copies of Lord Jim, The Frogs, Anabasis and The **Book** of Mormon, scanned straight off a dog-eared **print** copy and uploaded into cyberspace. It was strictly a cottage industry. But this month, electronic publishing came into the mainstream. An entry for this September's **Booker** Prize by British author Patricia Le Roy marks a complete break with tradition -- it is to be found only on an Internet Website. Angels of Russia, a novel set in the glasnost and perestroika years, has not gone into **print** anywhere in the world. Having accepted Le Roy's work and ensured online writing an entry into the literary establishment, the people behind the **Booker** are now philosophising about the need to upgrade the definitions of various terms that have suffered no change since Gutenberg -- **book** , jacket, **print** , page, spine. Publishing, ever a conservative industry, is having to come to terms with the defining deficiency disease of the digital age -- the constant, unrelenting need to upgrade. Does a digital text have a spine somewhere? Is it possible to 'turn' its 'pages'? Is it possible to curl up with a good electronic **book** ? For that matter, is it possible for it to come out in a calf-bound edition? With due mock-seriousness, the industry is even debating such fringe issues. There are serious-serious issues at hand, of course, because it is entirely possible for digital publishing to change the face of the industry. Over the last century, it has gotten used to going by the **book** . The first chapters of a literary work are written in obscurity. They are picked up by a literary agent who brings them to the attention of his favoured publishers. Some of the obscurity is thereby dispelled. A publisher chooses to make an advance. The writer is even less obscure now: he actually has a profession. Then the work comes out in a limited hardback edition, which is reviewed and thereby authenticated in the Times Literary Supplement. All parties having been satisfied, the **book** finally makes it to the mass market in paperback form, publication rights are distributed for various territories across the world and the writer gets a royalty. These repeated validations are very necessary in publishing, which is a notoriously chancy, high-investment business. Down the years, there has been only one notable departure -- Pan **Books** ' decision to dispense with hardbacks and

go straight into paperback, which started a worldwide trend. But none of these validations would apply to an online work, except the TLS review (TLS took dutiful note of Angels of Russia). They are vanities that have outlived their usefulness. Here, the literary agent is cut out of the picture altogether. Publisher investment is minimal. The advance is an unknown institution. The publishing format is, so far, almost irrelevant. There is no question of step-by-step, territory-by-territory marketing. A **book** on the Net sells globally, by definition. While traditional criticism is taking note of online writing, it is doubtful if the latter has any use for the critical establishment. The Net prefers to do without the hierarchies of criticism, control, validation and rejection that the offline world has institutionalised. A buyer on the Net does not depend upon authorised opinion or advertising to make his choices. Online Originals, the Website that has published Patricia Le Roy, was set up in reaction to mainstream publishing, which has become increasingly corporate over the years, and therefore increasingly unwilling to take risks. It tends to disfavour new writing, has enormous faith in celebrity names, and is an unlikely creative laboratory. Online Originals has gambled on the premise that the next big idea is not to be expected in hardback. It will, more likely, be delivered to you by email. The **Booker**'s capitulation is only the last, most visible step in a process that has been going on for almost two years. Something equally important preceded it last month. After two years spent trying to convince the authorities that an electronic text reader which looks like a physical **book** is a good idea, Everybook got a patent. It is a 'hardbound' unit the **size** of a novel that can be opened just like a **book**. Inside are two facing 'pages' --liquid crystal screens, actually, that displaying text in the serif fonts that traditionally find favour in **print**. Everybook, of course, is not really a **book**. Titles have to be bought separately stored on a microchip and inserted into the reader. Everybook is unlikely to be available calf-bound anytime soon, but an edition in a marbled jacket is definitely planned. It is an attempt to ensure a traditional reading experience in a digital format. Exactly the opposite is being attempted by the new genre of hyperfiction, which seeks to hand over control of plot development, normally the preserve of the writer, to the reader. Each hyperfiction page has a number of links. The plot develops according to which links the reader **chooses** to follow. In other words, every time he begins at the beginning, the reader is told a new story. Hyperfiction is so machine-based and so divorced from the familiar linear format of storytelling that publishers have been reluctant to venture into it. But now, the very respectable New York University Press has taken the plunge with a commitment to publish hyperfiction titles every year on its **Web** page. Probably, this is the way to the future, despite the current obsession with **producing** 'book-like' **electronic** texts. The children of today are as likely to read Alice in Wonderland for the first time on a **computer** as on paper. The readers of tomorrow, they will not really care what format their literature comes packaged in. If you look at a **book** as pages between covers, it is in trouble. If you look at it as an intellectual artifact that is written, read, stocked, bought, sold, discussed, eulogised and torn apart, it's leading a rich **electronic** life, for all these symptoms are visible on the Net. The **book**, which is regularly feared to be dying, is successfully mutating in **order** to survive. Copyright(c)1998 Indian Express Newspapers (Bombay) Ltd.

Something unusual happened to **books** this month. They no longer need to come out in hardback or paperback, nor in...

... June 1998 has seen the complete birth of the digital text. Of course, the **electronic book** has been around for almost a decade, but it has

always been copyright-expired material...

... library on the Internet would stock copies of Lord Jim, The Frogs, Anabasis and The **Book** of Mormon, scanned straight off a dog-eared **print** copy and uploaded into cyberspace. It was strictly a cottage industry. But this month, electronic publishing came into the mainstream. An entry for this September's **Booker** Prize by British author Patricia Le Roy marks a complete break with tradition -- it is...

... of Russia, a novel set in the glasnost and perestroika years, has not gone into **print** anywhere in the world. Having accepted Le Roy's work and ensured online writing an entry into the literary establishment, the people behind the **Booker** are now philosophising about the need to upgrade the definitions of various terms that have suffered no change since Gutenberg -- **book**, jacket, **print**, page, spine. Publishing, ever a conservative industry, is having to come to terms with the...

... possible to 'turn' its 'pages'? Is it possible to curl up with a good electronic **book**? For that matter, is it possible for it to come out in a calf-bound...

... of the industry. Over the last century, it has gotten used to going by the **book**. The first chapters of a literary work are written in obscurity. They are picked up...

...reviewed and thereby authenticated in the Times Literary Supplement. All parties having been satisfied, the **book** finally makes it to the mass market in paperback form, publication rights are distributed for...

... chancy, high-investment business. Down the years, there has been only one notable departure -- Pan **Books**' decision to dispense with hardbacks and go straight into paperback, which started a worldwide trend...

... almost irrelevant. There is no question of step-by-step, territory-by-territory marketing. A **book** on the Net sells globally, by definition. While traditional criticism is taking note of online...

... be expected in hardback. It will, more likely, be delivered to you by email. The **Booker**'s capitulation is only the last, most visible step in a process that has been...

... trying to convince the authorities that an electronic text reader which looks like a physical **book** is a good idea, Everybook got a patent. It is a 'hardbound' unit the **size** of a novel that can be opened just like a **book**. Inside are two facing 'pages' --liquid crystal screens, actually, that displaying text in the serif fonts that traditionally find favour in **print**. Everybook, of course, is not really a **book**. Titles have to be bought separately stored on a microchip and inserted into the reader...

... page has a number of links. The plot develops according to which links the reader **chooses** to follow. In other words, every time he begins at the beginning, the reader is...

... has taken the plunge with a commitment to publish hyperfiction titles every year on its **Web** page. Probably, this is the way to the future, despite the current obsession with **producing** 'book-like' **electronic** texts. The children of today are as likely to read Alice in Wonderland for the first time on a **computer** as on paper. ...not really care what format their literature comes packaged in. If you look at a **book** as pages between covers, it is in trouble. If you look at it as an...
